

## REMARKS

Claims 21-34 are presented for prosecution on the merits.

Claim 21 has been amended to more definitively set forth the present invention over the relied on prior art.

Claim 41 has been added.

As best understood, claims 21-34, and 41 presently stand rejected on Corey in view of Hullinger et al.

The rejection is respectfully traversed.

Applicants claim a system for the collection and conditioning of closed caption text where “all broadcast material” “from at least one broadcast source” is decoded into “broadcast” “text files” at a “first-time” and a non-active inquiry client had provided a “search profile” at a “prior time” which “search profile” is saved at the “prior time”, and a “format consistent” “text” “search result” is automatically sent to the non-active inquiry client (e.g. claim 21). A new up-to-date report is automatically made available to the non-active inquiry client (claim 41).

In marked contrast, Corey provides a search inquiry that makes a logic match to parts of closed-captioned text to retrieve a “video” “part” or corresponding to the text match. The inquiry is specific to previously broadcast video that the later in time inquiry then views. Corey admittedly has no server for storing such all broadcast material text in a database. This is because that server serves no useful purpose in Corey. There is no all broadcast material text

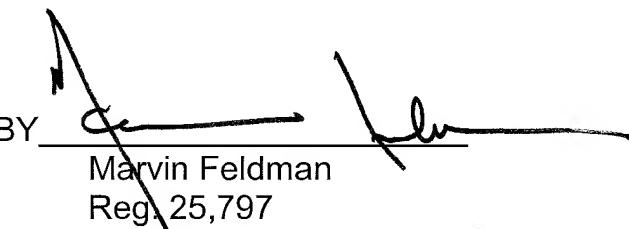

databases. The purported combination of the Hullinger et al. server in Corey is not suggested by and indeed not related to the Corey or Hullinger et al discloses and systems. The alleged combination of Corey with Hullinger et al. is beyond peradventure hindsight.

Claim 41 further distinguishes over Corey and Hullinger et al. Claim 41 claims a format consistent news search report of current news reportage that is automatically provided to the non-active profile-inquiring client stored search. These further limitations are further removed from Corey and Hullinger et al.

Applicants submit that the claims as amended are in form for allowance.

Respectfully submitted,

LACKENBACH SIEGEL, LLP
